$\qquad$

## Rectangular prism

$\rightarrow$ A rectangular prism has six faces, eight vertices and twelve edges.
$\rightarrow$ All the faces meet at 90 degrees.

$\rightarrow$ Opposite faces are parallel.

## Pentagonal prism

$\rightarrow$ A pentagonal prism has seven faces, ten vertices and fifteen edges.
$\rightarrow$ It has two pentagonal shapes and five rectangular shapes.
$\rightarrow$ It is a semiregular polyhedron.

## Hexagonal prism

$\rightarrow$ A hexagonal prism has eight faces, twelve vertices and eighteen edges.
$\rightarrow$ It is an octahedron.
$\rightarrow$ It has two hexagonal shapes and six rectangular shapes.

## Octagonal prism

$\rightarrow$ A octagonal prism has ten faces, sixteen vertices and twenty four edges.
$\rightarrow$ It has eight sides.
$\rightarrow$ It has two octagonal shape and eight rectangular shape.
